

**ABSTRACT OF THE DISCLOSURE**

5        A wrist support device for supporting a wrist of a user while  
the user is using a computer mouse. The wrist support device  
includes a base member being designed for being selectively  
coupled to the computer mouse. A cushion member is coupled to  
the base member whereby the cushion member extends upwardly  
10      from the base member. The cushion member is designed for  
supporting the wrist of the user to reduce the stress on the wrist of  
the user when a hand of the user is positioned on the computer  
mouse.
